STATEMENT OF WORK**STATEMENT OF WORK****Albeni Falls Dam Project
CADD-to-GIS Real Estate Parcels Conversion**

1. **Background and Description of Need.** Seattle District requires GIS coverage of its real estate at the Albeni Falls Dam project to support management of several kinds of resources and all-on-the-ground operation and maintenance activities on non-fee lands, including revision of the project's Master Plan beginning in Fiscal Year 2004. The project has several kinds of estate: fee and at least two kinds of flowage estate, as well as withdrawals from public domain lands. At present the information about the estates is stored in several different electronic and physical formats, requiring considerable time and expense that must be devoted to searching documentation to answer questions about estate in any one area. The time and effort needed for physical search can hinder quick analysis of environmental effects of proposed management actions. Availability of a provisional level of GIS documentation would substantially reduce the time required to address analyses.

2. **Statement of Services.** The Contractor shall furnish all services, labor, materials and equipment to carry out work specified herein. The Contractor shall perform all services to standards, quantities, and schedules described in following paragraphs.

3. **Deliverables.** The following products are deliverable to the Government.

1. *CADD file afseg-v.dgn of SE-RE-382 has an error in it somewhere, determine from acquisition documents where the error is and correct the CADD file before using it for the GIS task. Also provide a corrected CADD file in Microstation format.*
2. A single master ArcView™ polygon shapefile consisting of the combined real estate parcels from all 30 CADD DGN files, and any necessary derivative files. Required attribute fields:

 - 5) Acres of each tract
 - 6) Remarks**For the Easement they should also be attributed with the Easement type (i.e. perpetual flowage, access road, restrictive, utility, etc.) which should be in the remarks on the spreadsheet or on the map in the tract register.*
3. A single master ArcView™ line shapefile for each of the following feature types: river (centerline, banks and meander), roads and utilities, and any necessary derivative files.
4. *Metadata* in accordance with FGDC standard, including an ancillary written log documenting problems in matching boundaries or attributing.

4. **Technical Standards and Requirements.** Master and derivative products are to be for analytic use as provisional layers, and will not be used for cadastral purposes until metadata can be properly verified in

accordance with FGDC standard. There are known problems with matching parcel boundaries that cannot be resolved in this exercise.

- a. Projection of all shapefiles shall be UTM Zone 11, NAD83
- b. Version of shapefiles shall be Arcview 8.3
- c. The *tract number field* must be fully populated. The *US ACQ CAT (Easement, Public Domain, Permit, Fee, License, Lease)* must be populated to the fullest extent possible.
- d. Contractor shall document in writing all problems in matching parcel boundaries, assigning tract numbers or assigning easement class to parcels.
- e. Polygons should be contiguous, without gaps and without overlap; *except* where such gaps or overlap exist in original source data (paper or electronic) and cannot be resolved by use of original turning point data in easement tract descriptions. In such a case, a *master* shape- or line layer shall replicate source information faithfully. Draft corrections shall be presented in *derivative* layers. Files shall clearly indicate master or derivative status.
- f. Features in the shapefiles, when placed as layers in a GIS over 1:24,000 USGS topo quads of the same projection, shall line up with corresponding features in the topo maps; *except* where the original source data (paper or electronic) deviate from alignment. File names and metadata shall clearly indicate master or derivative status.
